

CI/CD build service

This is still a work in progress.

We are currently evaluating different options.

Very likely we will offer Forgejo actions (compatible to Github actions).

We are also looking into offering the highly flexible Buildbot system for trusted members.

Another option might be the Woodpecker CI system.

Code review

We are also looking into hosting a local instance of [Renovatebot](#) for automated code-review and dependency management.

Revision #3
