

# Webfrontend and apps

GoToSocial generally works with all Mastodon API compatible mobile and desktop apps, but it only has a read-only web-interface itself. So to post something to your account you need to use an external app.

We host such an web-app for easy use on <https://phanpy.f-hub.org>

It will ask for the address of your Mastodon instance, where you can use `social.f-hub.org` to log in.
