

Weblate

This is a work in progress

You can find our [Weblate translation tool here](#).

You can log in with your account from our main git-forge easily and all registered users have permissions create new translation projects. If you run into any issues with that please contact us via the [#support chat room](#) or on the dedicated group forum [here](#).

Integration with git-forges

Weblate supports syncing and automatic creation of pull-requests on all major git-forges, including our own Forgejo instance.

This is still a work in progress, but we hope to activate this feature soon.

For now you can look up how the [integration works on the Codeberg documentation](#), which also uses Weblate and Forgejo for their service.

Revision #2
